

Requesting PIW Input from MIS

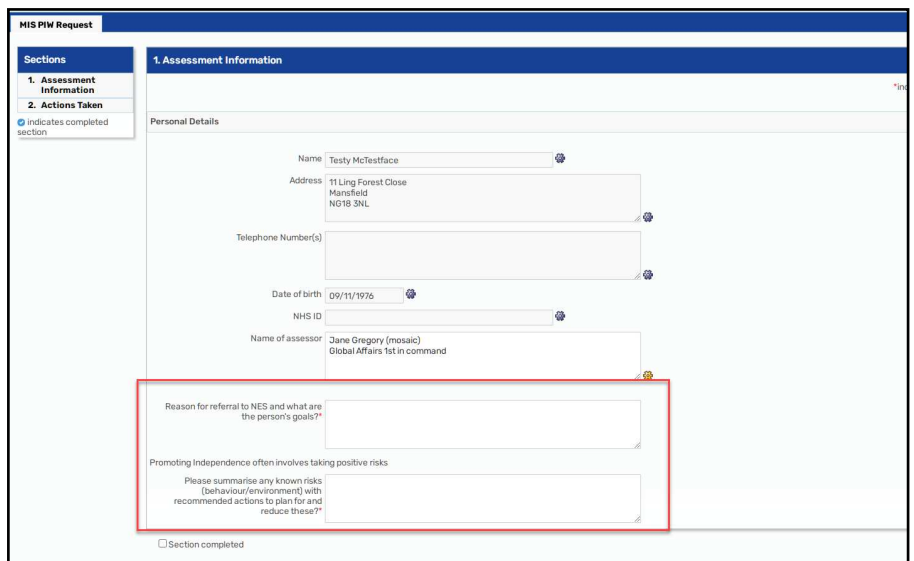

MIS Teams Using the Conversation Steps please talk to the project.

The workflow for requesting a PIW is changing for community teams. We are doing this to try and stop a number of requests going to MIS without the request form being completed.

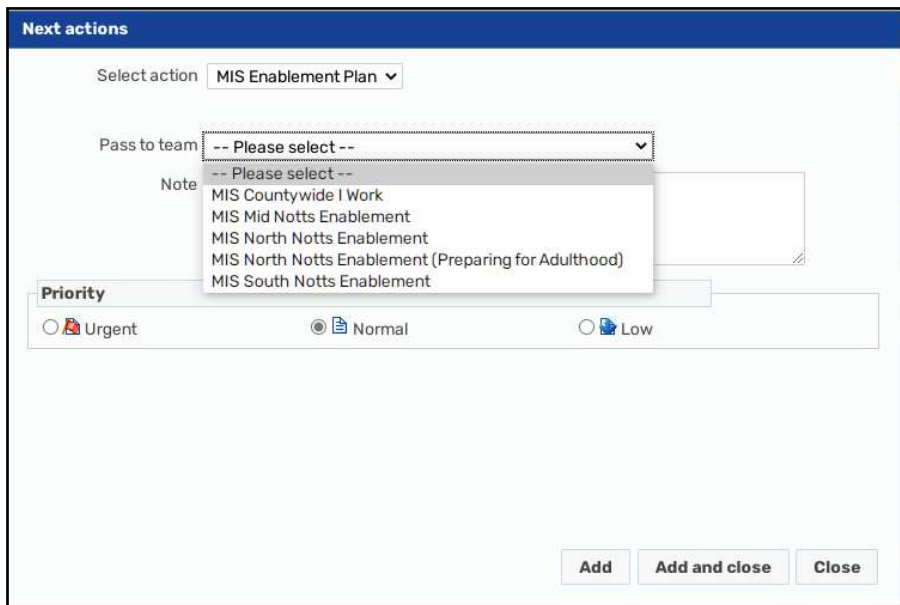

1. From the Next Actions area choose MIS PIW Request
Request from the Select action drop down list.
2. Tick Send Immediately? This will allow the next action to be sent on save so the work can continue on both the current step and the MIS PIW Request step.
3. Click Assign To Me to assign the step to yourself to complete.
4. Click Add and Close.
5. Click  Save on the Step screen.
6. When you close the step window the MIS PIW Request will be in your Incoming work folder.

7. Start the MIS PIW Request.
8. Complete the two mandatory fields with as much information as necessary for MIS to make a decision.
9. Click on Actions Taken.

10. Click Add and choose MIS Enablement Plan.
11. Pass to the relevant MIS team.
12. Click Add and close.
13. Finish the step to send it to the MIS Team.
